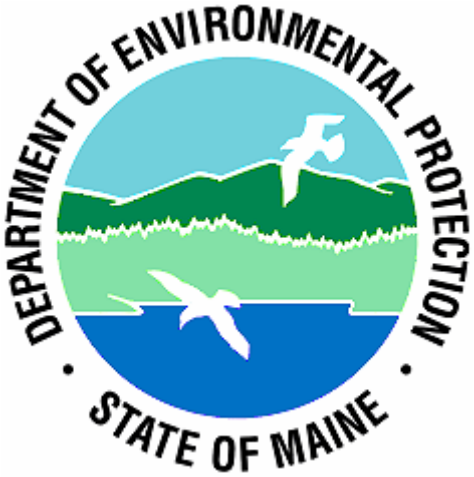
State of Maine

2003 & 2004

Biennial Hazardous Waste Activities Report



Prepared by:
Maine Department of Environmental Protection

December 2005

TABLE OF CONTENTS

LIST OF FIGURES AND TABLES

Introduction{ TC "Introduction" \f A \l "1" }

The Maine Biennial Hazardous Waste Report for 2003 and 2004 has been prepared by the Maine Department of Environmental Protection ("DEP") to fulfill the legal requirements of 38 M.R.S.A. § 1319-Q (2).

Hazardous waste information was tallied using the DEP's hazardous waste manifest computer database. All businesses that ship hazardous waste, regardless of quantity, are required to use a hazardous waste manifest. The manifest data includes shipments from those who regularly generate and ship hazardous waste and are required to submit annual reports plus one-time generators of hazardous waste and small quantity generators. The hazardous waste quantities reported on the manifests which are not reported in pounds are converted to pounds using conversion factors based upon the type of waste. This report does not include hazardous waste generated and treated on-site under abbreviated treatment licenses since this data is not in the computer database, and it is a relatively minor amount compared to the shipment data. This report also does not include information about waste oil or bio-medical waste generation or shipment. The report data has been supplemented with information on universal wastes from the manufacturer take-back program.

In addition to one-time generators, Maine has three regulatory categories of hazardous waste generators. Small Quantity Generators (SQGs) generate up to 100 kilograms or 220 pounds per month and cannot accumulate more than one 55-gallon drum or 440 pounds on site at any one time. SQGs have the fewest regulatory requirements. Those in the Small Quantity Generator Plus (SQG Plus) category have the same monthly generation restrictions as SQGs, but can accumulate up to three 55-gallon drums or 600 kilograms of hazardous waste on site at any one time. SQG Plus generators have extra regulatory requirements in addition to those that SQGs must adhere to. Fully regulated generators (a.k.a. large quantity generators or LQG's) generate more than 100 kilograms or 220 pounds per month or accumulate more than 600 kilograms on site at any one time. Both SQG Plus and fully regulated generators are required to obtain a permanent US Environmental Protection Agency (EPA) identification number. SQGs use the generic Maine DEP identification number, MEX020000000. An additional number system was designed for emergency shipments or one-time generation of hazardous waste using temporary identification numbers beginning with "MEP". Examples of one-time generation of hazardous waste would be remedial activity and underground gasoline storage tank removals.

Waste Generation{ TC "Waste Generation" \f A \l "1" }

For the 2003 and 2004 Biennial Hazardous Waste Report, the Department's hazardous waste manifest database was analyzed for generation amounts, waste codes, and export information for all generators, not just those required to report this type of information to the EPA. In years prior to 1993, report analysis was heavily based on EPA Biennial Report data, which was submitted only by fully regulated generators. The continued use of the manifest database will facilitate analysis and provide for consistent and more complete reporting as well as reducing the time needed to complete past reviews or future analyses.

In 2003, 36,757,000 pounds of hazardous waste and in 2004, 18,020,000 pounds of hazardous waste were generated and shipped by Maine generators. Universal wastes, a sub-

category of hazardous waste, are regulated under Maine Hazardous Waste Management Rules as amended on January 23, 2001. Reporting of the recycling efforts for universal wastes begin on page 9 of this report. The totals contained in the hazardous waste sections of the report do not include the amounts of universal wastes being managed.

Table 1 shows Maine hazardous waste generation for 2003 and 2004 by generator type, while Figures 1 and 2 illustrate the percentage of hazardous waste shipped by generator type.

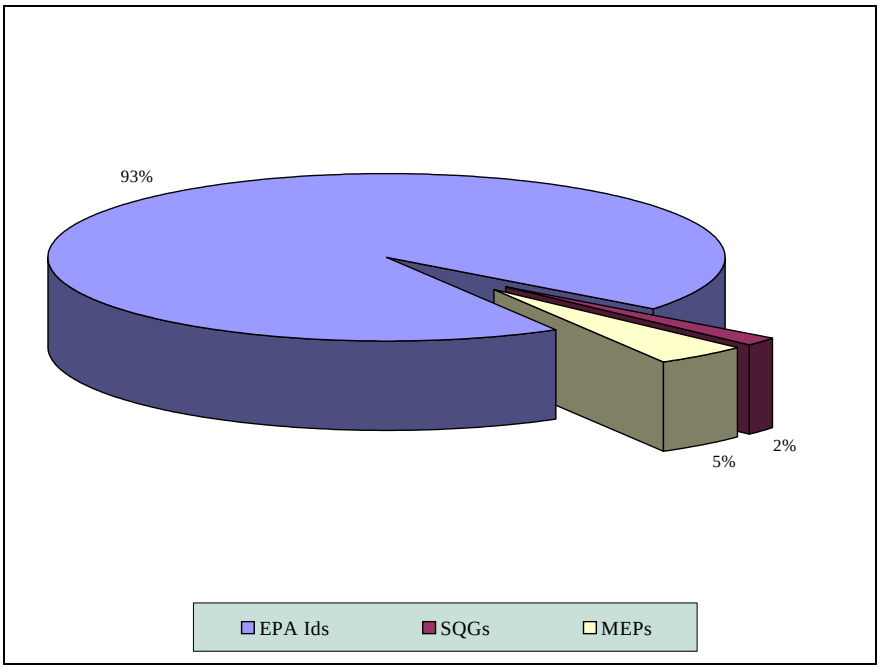
Table 1

Hazardous Waste Shipping Information from Manifests

Generator Type	Quantity in Pounds for 2003	Quantity in Pounds for 2004
Generators with Assigned ID Numbers	34,466,000	15,305,000
One-time Generators	1,679,000	2,137,000
Small Quantity Generators	612,000	578,000
Total	36,757,000	18,020,000

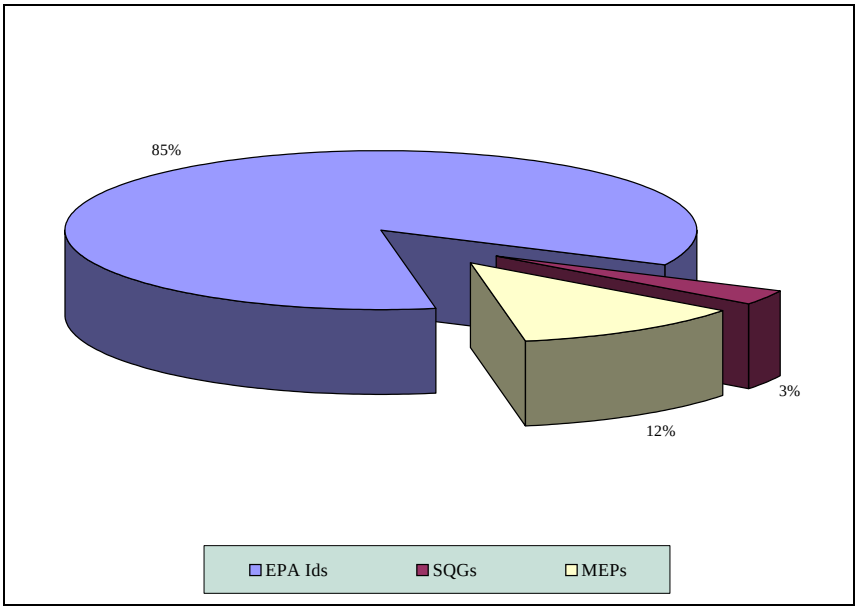
2003 Hazardous Waste Generation

Figure 1



2004 Hazardous Waste Generation

Figure 2



For a breakdown of the quantity of hazardous waste generated in pounds for 2003 and 2004, by waste code, see Table 2. For a graphical representation of this same data, see Figures 3 and 4. Polychlorinated biphenyls (PCBs) are regulated by EPA as toxic substances, but in Maine, wastes containing fifty (50) parts per million or greater of PCBs are listed as a hazardous waste and are assigned the waste identification code M002. It should be noted that the data in Table 2 and Figures 3 and 4 represent an approximate breakdown of hazardous waste quantities by waste code. The reason for the approximation is that many wastes can have more than one waste code to describe that waste and there is no State or Federal rule providing for any specific precedence of one waste code over another. Therefore the data represents the first waste code listed for each waste item described on a manifest.

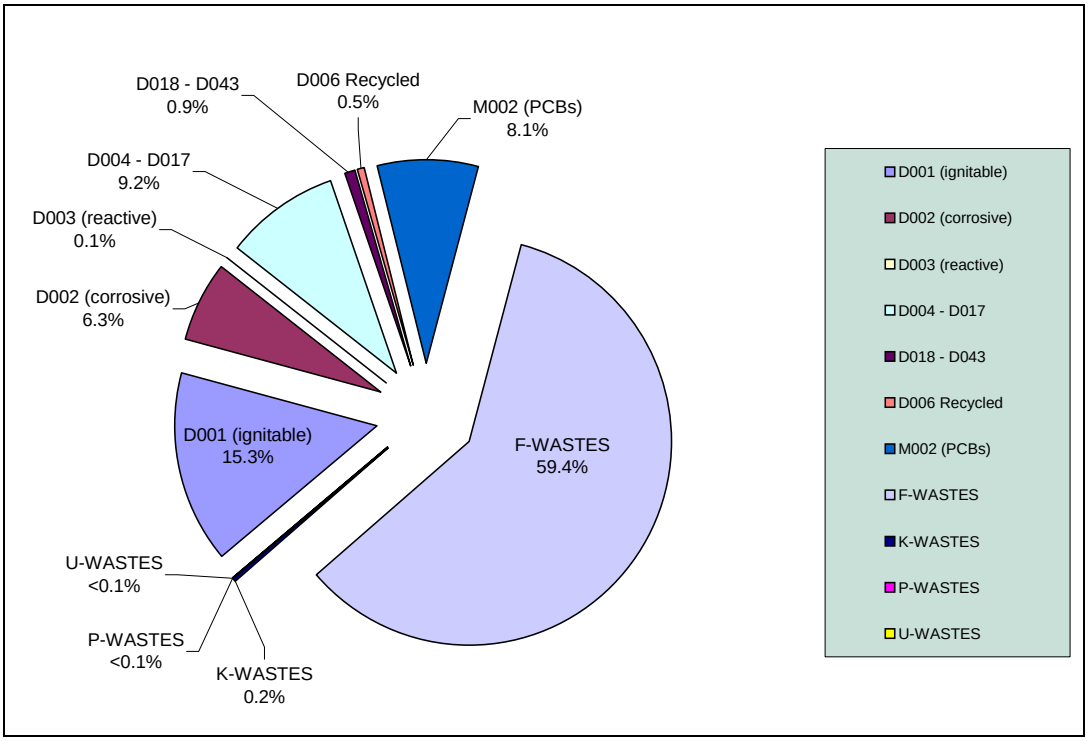
Table 2

Total Quantity of Hazardous Waste Generated in 2003 and 2004 by Waste Code

Waste Codes (Types)	Quantity in Pounds for 2003	Quantity in Pounds for 2004
D001 (Ignitable)	5,600,000	5,714,000
D002 (Corrosive)	2,314,000	2,295,000
D003 (Reactive)	42,000	30,000
D004-D017 (metals & pesticides)	3,358,000	3,350,000
D018-D043 (Federal TCLP organics)	322,000	602,000
D006 (recycled plastic with cadmium)	174,000	244,000
F-wastes (non-specific source wastes)	21,782,000	4,919,000
K-wastes (specific source wastes)	87,000	57,000
M002 (PCB's over 50 ppm)	2,975,000	755,000
P-wastes (acute wastes)	2,000	1,000
U-wastes (toxic wastes)	18,000	16,000
Miscellaneous (various)	83,000	37,000
Total	**36,757,000**	**18,020,000**

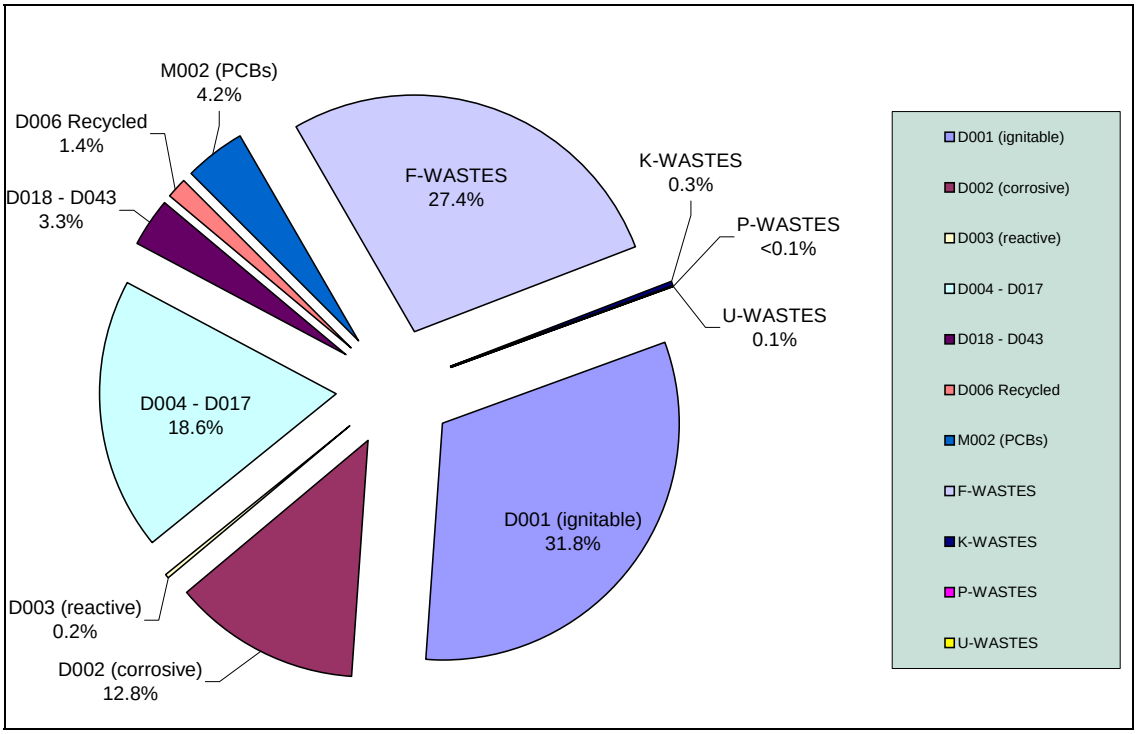
2003 Hazardous Waste by Waste Codes

Figure 3



2004 Hazardous Waste by Waste Codes

Figure 4

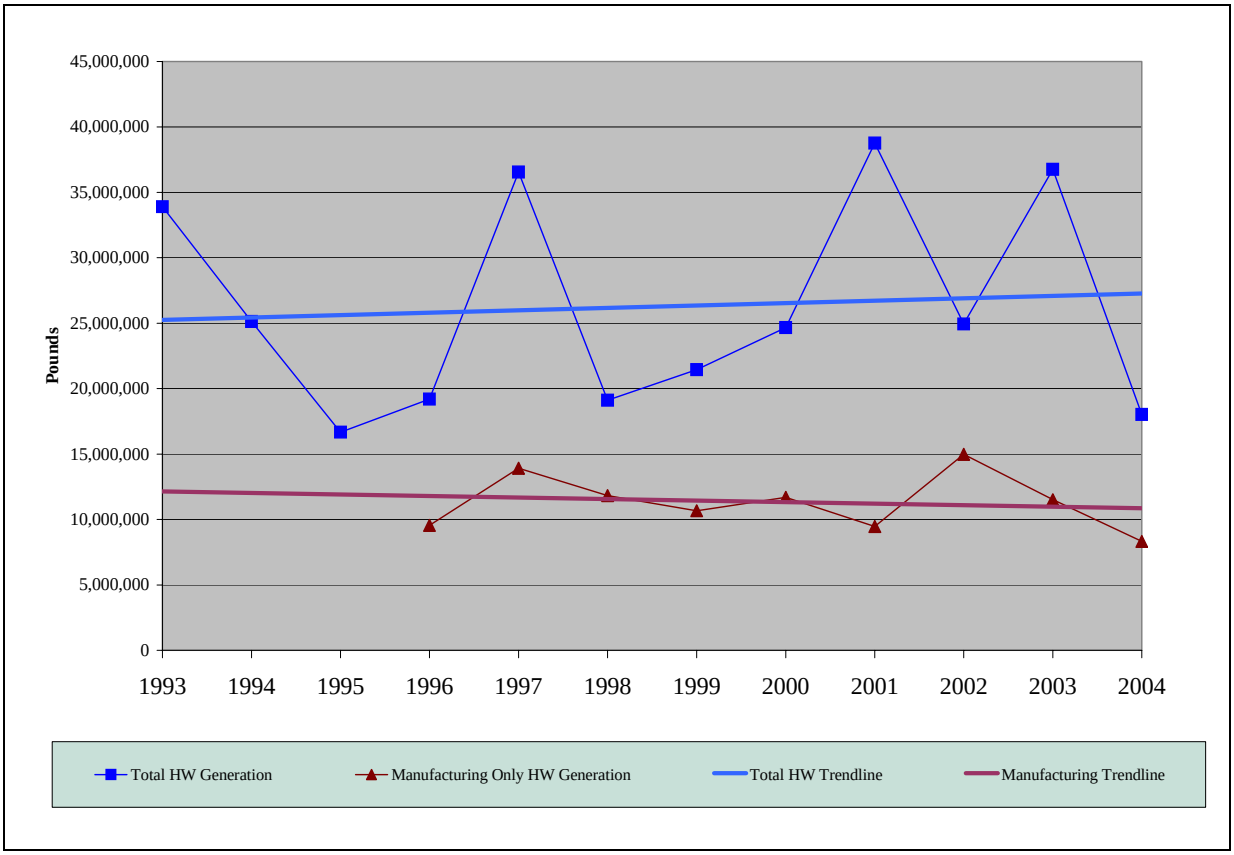


Waste Generation Trends{ TC "Waste Generation Trends" \f A \l "1" }

Hazardous waste trends were analyzed for SQGs and generators with permanent EPA identification numbers to assess overall generation gains and/or declines. Figure 5 illustrates the hazardous waste generation trends since 1993. Two different sets of data are plotted in the graph below. The first is the total amount of hazardous waste generated in Maine, which includes hazardous waste from manufacturing, commercial activities, remedial action sites, superfund sites, corrective action sites and generator remediation sites. This trend varies considerably from year to year depending on the number of remediation/ corrective action projects underway during each year and the volume of clean-up wastes generated from such projects. For example, the increase in the total amount of hazardous waste generation between 2002 and 2003 is primarily from two remediation/corrective action projects involving the clean-up of chlorinated and non-chlorinated solvent contaminated soils. The first site is the Eastland Woolen Mill, located in Corinna, where 14,242,000 pounds of soil contaminated with the chlorinated solvent chlorobenzene (F002) were removed and the second site is National Semiconductor, located in South Portland, where 6,654,000 pounds of soil contaminated with chlorinated and non-chlorinated solvents (F001, F002 & F003) were removed as a result of remediation activities. The second trend line in the graph shows hazardous waste generated solely from manufacturing and commercial activities since 1996. This trend indicates that hazardous waste generated from all manufacturing and commercial activities has remained fairly constant since 1996.

Hazardous Waste Generation Trends Analysis

Figure 5



Note: The data for total hazardous waste generation trend in Figure 5 has been updated from that previously shared with the Natural Resources Committee members as a result of a data quality assurance review.

Licenses and Abbreviated Licenses{ TC "Licenses and Abbreviated Licenses" \f A \l "1" }

As of December 2004 there are eighty-two (82) hazardous waste licenses currently in effect. This includes sixty-two (62) Beneficial Reuse On-site, five (5) Treatment in Tanks, five (5) Precious Metal Recovery, one (1) Volume Reduction Unit, two (2) Transfer Facility, three (3) Commercial Storage, one (1) Commercial Treatment and Storage and one (1) Post Closure license. Twenty-eight (28) licenses and abbreviated licenses were issued or renewed in 2003 and twenty-two (22) were issued or renewed in 2004. A complete listing of the companies by license type can be found in Appendix A.

Import/Export Information{ TC "Import/Export Information" \f A \l "1" }

Imports: Approximately 355,000 pounds in 2003 and 1,188,000 pounds in 2004 of hazardous waste were imported into Maine from other states or Canada for treatment or recycling. Enpro Services of Maine (Enpro) was the receiving facility for over 99% of the imported waste in 2003. Enpro is fully permitted and licensed by the Department to treat gasoline and oil-contaminated water as well as store hazardous waste for transport to other locations. In 2004 approximately 106,000 pounds of waste sulfuric acid was imported from Becancour, Quebec to Maine Alum located in Grand Isle to be recycled in the process of making alum, a chemical used in the manufacture of paper. Additionally, Portsmouth Naval Shipyard imported hazardous waste from other military facilities to store for subsequent transport to facilities licensed for treatment or disposal. Portsmouth Naval Shipyard imported 9,000 pounds in 2003 and 4,000 pounds in 2004. See Table 3 for amounts of hazardous waste imported from other states and Canada. The amount of waste imported is based on the wastes that are deemed hazardous in the State of Maine, and does not include waste deemed hazardous in another state or country, if that waste (i.e. waste oils) is not considered hazardous waste in Maine.

Table 3

Hazardous Waste Imported from Out of State or Canada:

State (from)	Total (pounds) 2003	Total (pounds) 2004
Connecticut	0	14,000
Massachusetts	230,000	484,000
New Hampshire	99,000	562,000
New York	0	12,000
Rhode Island	0	0
Vermont	26,000	10,000
Canada	0	106,000
Total	355,000	1,188,000

Exports: Of the 36,757,000 pounds of hazardous waste generated and shipped by Maine generators in 2003, 99% (36,469,000 pounds) was exported to other states and Canada for treatment, storage, or disposal, Of the 18,020,000 pounds generated in Maine in 2004, 94% (16,964,000 pounds) was exported to other states and Canada. In 2003 the Eastland Woolen Mill, located in Corinna, exported 14,242,000 pounds of soil contaminated with the chlorinated solvent chlorobenzene (F002) and National Semiconductor, located in South Portland, exported 6,654,000 pounds of soil contaminated with chlorinated and non-chlorinated solvents (F001, F002 & F003) to either Stablex Canada in Blainville, Quebec or to GSI Environmental in

Sherbrook, Quebec. In 2004 the Eastland Woolen Mill exported 982,000 pounds of soil contaminated with the chlorinated solvent chlorobenzene (F002) and National Semiconductor exported 3,275,000 pounds. For a complete breakdown of wastes exported to other states and Canada, see Table 4.

Table 4

Maine Waste Exported to Other States/Foreign Countries

State (to)	Total (pounds) 2003	Total (pounds) 2004
Canada	21,014,000	4,314,000
Alabama	72,000	99,800
Arkansas	2,500	4,000
Arizona	39,000	0
Colorado	0	0
Connecticut	1,110,000	675,000
Florida	19,000	3,600
Georgia	6,000	1,000
Idaho	734,000	0
Illinois	65,000	63,000
Indiana	199,000	216,000
Kansas	0	0
Kentucky	94,000	120,000
Louisiana	4,000	0
Massachusetts	3,559,000	2,557,000
Maryland	186,000	0
Michigan	544,000	622,000
Nebraska	10,000	0
New Hampshire	21,000	8,000
New Jersey	2,124,000	2,324,000
New York	2,905,000	2,278,000
North Carolina	16,000	66,000
Ohio	1,462,000	1,920,000
Pennsylvania	591,000	856,000
Rhode Island	266,000	318,000
South Carolina	9,000	11,000
Tennessee	0	60
Texas	19,000	1,400
Utah	1,199,000	114,000
Virginia	7,000	0
Vermont	59,000	20,000
Washington	0	0
Wisconsin	133,000	372,000
Total	36,469,000	16,964,000

Maine Waste Received by Maine Treatment and Storage Facilities{ TC "Maine Waste Received by Maine Treatment and Storage Facilities" \f A \l "1" }

In 2003, 771,000 pounds of hazardous waste and in 2004, 1,004,000 pounds of hazardous waste generated in Maine was shipped to licensed treatment or storage facilities (TSF) within the state. Safety-Kleen Corporation in Leeds received approximately 300,000 pounds in 2003 and 384,000 pounds in 2004 of this waste. Most of this waste is parts washer solvent that Safety-

Kleen bulks in on-site storage tanks for shipment to an off-site treatment (reclamation) facility. Enpro Services of Maine in South Portland received approximately 792,000 pounds in 2003 and 1,584,000 pounds in 2004 of Maine generated waste consisting primarily of waste gasoline and water mixtures. Other than the gasoline-contaminated wastewater treated on-site, the remaining hazardous waste (primarily waste gasoline) received by Enpro is ultimately sent out of state for treatment and/or disposal. Additionally Portsmouth Naval Ship Yard, also a licensed storage facility, receives hazardous and universal wastes from other military bases (to store, bulk and subsequently ship to licensed treatment or disposal facilities) and in 2003 received approximately 46,000 pounds of hazardous waste (including 9,000 pounds from out-of-state bases) and in 2004 it received approximately 28,000 pounds of hazardous waste (including 4,000 pounds from out-of-state bases).

Hazardous Waste Facilities{ TC "Hazardous Waste Facilities" \f A \l "1" }

A listing of commercial hazardous waste facilities within the United States, based on 2003 biennial report data, is available at the Department. A copy of the list can be obtained for a fee by contacting the National Technical Information Service at (703) 487-4650 or via the Internet at no charge at: http://www.epa.gov/epaoswer/hazwaste/data/br03/index.htm . In Maine, there are four fully licensed commercial hazardous waste facilities. They include three commercial storage facilities licensed by the Department: Safety-Kleen Corp. in Leeds, Central Maine Power in Augusta, and Portsmouth Naval Shipyard in Kittery; and one licensed commercial treatment and storage facility, Enpro Services of Maine in South Portland which treats gasoline and oil-contaminated wastewaters that have the characteristic for ignitability. Enpro Services of Maine is also a licensed waste oil dealer. The Department does not recommend legislative action to develop or establish a state-owned or operated hazardous waste facility [see 38 M.R.S.A. § Section 1319-Q (4)].

Transporters{ TC "Transporters" \f A \l "1" }

Maine's Hazardous waste generators are required to ship their wastes using licensed hazardous waste transporters. Transport companies apply to be licensed annually by the Department. The Department licenses the company, the conveyances, and the conveyance operators. Driver's records are reviewed. The companies, once listed, are placed on a list of licensed transporters which is available to the public. A complete list of transporters, their site and mailing addresses, and phone numbers is supplied in Appendix B.

Universal Waste{ TC "Universal Waste" \f A \l "1" }

A universal waste is a hazardous waste that is specifically designated by the Board of Environmental Protection as a universal waste because it is widely generated. Small businesses that typically do not generate other hazardous waste do generate universal waste. On January 23, 2001, the Hazardous Waste Management Rules were amended to include a category called Universal Wastes and to encourage recycling and proper management of these wastes.

Universal wastes include mercury or lead containing lamps (Sodium Vapor, HID or fluorescent), mercury thermostats, cathode ray tubes (CRTs), non-leaking polychlorinated biphenyls (PCBs)

lamp ballasts, mercury devices such as mercury thermometers and switches, mercury switches from automobiles, and certain batteries. Electronic devices containing circuit boards are also being managed as universal waste even though it is not defined in the Rules. Waste generated from households are exempt from the hazardous waste management rules, but such household wastes which meet the description of universal wastes and which are collected at municipally owned Central Accumulation Facilities, and at sites sponsored by the Rechargeable Battery Recycling Corporation (RBRC) and the Thermostat Recycling Corporation (TRC), are included in this report.

Universal waste shipments are tracked by either a log system, through the use of Uniform Bills of Lading (UBOLs), or reports from manufacturer take back programs. The UBOLs are entered into the Department's manifest database. Universal waste can be collected at Central Accumulation Facilities (company or municipally owned) and commercial Consolidation Facilities before being shipped to a Recycling Facility. Universal Waste going to a Recycling Facility must be documented on a UBOL. The Department arrived at the numbers for this report by reviewing the manifest database and reports from the TRC and RBRC manufacturer take back programs. Table 5 lists the number of universal waste items that were shipped for recycling or disposal in 2003 and 2004. Figures 6 & 7 show the number of items in a bar graph format. Lamps (Figure 7) were given its own graph simply because the total numbers of lamps vastly outnumber all other categories. The pie charts shown in Figures 8 and 9 documents that mercury and lead containing lamps make up the largest portion of universal waste handled.

The data quality improved when comparing the two years. In 2004, the number of times items reported in pounds decreased significantly from the 2003 data. The Rules require that universal waste be reported as an item count. The improvement in the data reflects the educational efforts of Department staff.

Table 5
Universal Waste Items Recycled or Disposed by Type

Type of Universal Waste	Total number of items in 2003	Total Number of items in 2004
Mercury or lead containing lamps	555,918	732,645
Batteries	48,960	105,804
Cathode Ray Tubes	44,629	52,644
PCB Ballasts	25,354	33,942
Mercury Thermostats	1,880	1,414
Mercury Devices	6,809	6,998
Motor Vehicle Switches	1,613	3,831
Electronic Devices		589
